Village Safe Water Program Capital Improvement Project Construction Project Application

APPLICATION REQUIREMENTS

All applications must include the following:

♦ Construction Project Application (pages 2-3)

Application in any other form will not be accepted

- ♦ Letter requesting project signed by the applicant
- ♦ Sanitation Improvement Needs Report for project being requested

Application Deadline

All application must be received by 11:59 p.m. on Friday May 6, 2022.

Application may be submitted to the following:

Email: dec.vswfunding@alaska.gov

Faxes will not be accepted

Mail: Village Safe Water Program

Attention: Carrie Bohan

P.O. Box 11180 Juneau, AK 99811

APPLICATION INSTRUCTIONS

Detailed instructions are provided on pages 4-6

APPLICATION REVIEW AND SCORING

All applications received before the deadline will be considered for scoring by applying the eligibility criteria. All eligible applications will be scored using the criteria provided on page 7.

Scoring Committee

A scoring committee will review and score applications according to established criteria. The scoring committee will be made up of representatives from:

Alaska Department of Environmental Conservation (ADEC)

US Environmental Protection Agency (EPA)

US Department of Agriculture, Rural Development (USDA RD)

Indian Health Service (IHS)

Alaska Native Tribal Health Consortium (ANTHC)

Scoring Process

Preliminary scores will be provided to the applicant and the VSW or ANTHC engineer assigned to the community. Scores will not be provided to consultants.

If the applicant believes that a scoring error has occurred, they will be provided with an opportunity to inform VSW about the potential error. Only information submitted with the original application will be considered when finalizing the application score.

The scoring committee will consider information about potential errors and will provide a final score to the applicant.

Eligibility Information

Community Type

The State of Alaska Village Safe Water (VSW) Statute establishes specific types of communities that are eligible for VSW funding. Your community is eligible if it meets one of the community types listed on the application. If your community is not eligible for VSW funding, contact the ADEC Facilities Programs at (907) 465-5143 to find out about other funding opportunities.

Operations and Maintenance Best Practices Score

Communities must demonstrate a minimum level of capacity for operating and maintaining sanitation facilities to be eligible for VSW funding. Capacity is demonstrated through the Operations and Maintenance Best Practices Scoring (O&M Best Practices).

Served Communities

These are communities where most homes have running water and sewer service. Served communities must demonstrate an O&M Best Practices score of at least 60 points to be eligible for VSW construction project funding.

Unserved/Underserved Communities

These are communities where most homes currently do not have running water and sewer service from either pipes or individual wells and septic systems. Unserved and underserved communities must demonstrate an O&M Best Practices score of at least 35 points to be eligible for construction projects to repair or replace core facilities that have exceeded their design life, but maintain the current level of service. A minimum score of 35 points is also required to be eligible for funding for design of non-core facilities; construction funding for non-core facilities requires a minimum score of 60 points.

Service Level	O&M Best Practices Score	Project Eligibility
ed/ rved	0-100	CIP Planning CIP Design and Construction of Decentralized Services
Unserved/ Underserved	35+	CIP Design of Non-Core Facilities CIP Design and Construction Core Facilities that exceed their design life
7 5	60+	CIP Construction of Non-Core Facilities
Served	0-100	CIP Planning CIP Design and Construction of Decentralized Services
Se	60+	CIP Design and Construction of Community Facilities

Core Facilities

For unserved and underserved communities, core facilities are the water source and transmission, water treatment plant/washeteria and associated water storage, collection and treatment of wastewater from washeteria, and honey bucket disposal.

Approved Planning Project

A community must have a completed planning document such as a Preliminary Engineering Report (PER) or Technical Memorandum that has been reviewed and approved by the Multi-Agency Review Committee to be eligible for VSW construction project funding. If your community does not have an approved PER, you are encouraged to apply for planning project funding. A list of approved PERs is available online at: https://dec.alaska.gov/media/15729/list-of-vsw-reviewed-pers.pdf

Village Safe Water Program Capital Improvement Project Construction Project Application Instructions

Approved Sustainability Plan (Required for first time piped service projects only)
An unserved community requesting construction funding for a first service project to install piped water and/or sewer must have a completed Sustainability Plan approved by the Multi-Agency Review Committee. Guidance on Sustainability Plans is available at: https://dec.alaska.gov/water/village-safe-water/grant-application/.

Project Information

Project Title

Provide a title for the proposed construction project. The title should match the title provided in the Sanitation Improvement Need Report.

Deficiency Level

Provide the total number of homes that are occupied year-round that will benefit from the proposed project.

Also, provide the number of homes that will benefit from the proposed project that have previously been served with indoor running water and sewer service from pipes or well and septic system, from community covered haul system, and how many homes have never been provided with service.

Required Attachments

All applications require the following attachments:

Letter Signed by the Applicant

All applications require a letter, signed by the applicant, requesting the project. The letter should explain, in the applicant's own words, why the project is needed. The letter should not be a duplicate letter prepared by an agency or a consultant.

Original, photocopied or scanned electronic versions of the signed letter will be accepted. An example of a community letter can be found online at:

https://dec.alaska.gov/media/15715/example-community-letter-requesting-construction-funding.pdf

Sanitation Improvement Needs Report for the Project Being Requested

The Sanitation Improvement Needs Report includes the project scope description and total cost estimate for the project being requested. The information in the report is entered by the VSW or ANTHC engineer assigned to your community. A list of communities and the assigned engineer is available online at: https://dec.alaska.gov/Applications/Water/OpCert/community-water-sewer-improvement-contact-list.xlsx

To obtain the Sanitation Improvement Needs Report for a project, you can contact the VSW or ANTHC engineer assigned to your community. You can also follow these instructions to access the report online:

Go to https://wstars.ihs.gov/ and select "Alaska Area." Select "Public Access" near the bottom of the page. Select "Proposed Alaska Sanitation Needs – by Community." Select your community to see a list of proposed projects for your community. To view a specific project, click on the project number. Click on the "View as PDF" at the top of the project page to open a PDF document that can printed or saved and attached to the application. The following page provides images of this process.

Village Safe Water Program Capital Improvement Project Construction Project Application Instructions

Project Scoring Criteria

Describes the level of service or improvement the majority of the project costs will provide First Service: Fully piped, closed haul, or onsite water and wastewater service to homes not previously served at the proposed service level Water Treatment Plant/Washeteria Upgrade or Replacement in Unserved Community: Upgrade or replacement of a combined water treatment plant/washeteria in a community that lacks water and sewer service to a majority of homes The existing facility to be upgraded or replaced must be at least 25 years old. Regulatory Compliance (Drinking Water only): Address "verified" facility-related regulatory compliance (DEC Drinking Water Program verification required) Erosion and Thawing Permafrost Impacts: Protect, move or replace essential system components endangered by erosion or thawing permafrost Essential Upgrades: Upgrade or replace existing water or wastewater system components that have exceeded their capacity or design life, resulting in present and continuous compromises in health benefits of the system and representing a clear and substantial health hazard Beneficial Upgrades: Upgrade system components or increase operational efficiencies to address intermittent compromises affecting the health benefits of the system. Includes all solid waste improvements. Desired Upgrades: Upgrades that are not considered "Essential Upgrades" or "Beneficial Upgrades" as defined above DEFICENCY LEVEL Describes the level of service of the majority of homes that will benefit from the project Never been served with running water and sewer service 10 CAL CAPACITY Reflects the community's capacity for operations and maintenance of sanitation infrastructure One point for every Operation and Maintenance Best Practices point above 60 0 - 40 Related Projects Coordination with other funded projects in the community will impact cost or efficiency 5 APPLICATION QUALITY Describes the level of completeness of the application and quality of the supporting documentation Information is complete in deve	Criteria	Points
