2024 Summer Season Air Quality Report for Knik Tribe, Wasilla, Alaska

The QuantAQ MODULAIR sensor in Wasilla (1744 Prospect Dr, Palmer, AK 99645) was installed on 08/06/2024.

The sensor measures for carbon monoxide (CO), ozone (O₃), nitrogen oxide (NO), nitrogen dioxide (NO₂), particulate matter (PM_{2.5} and PM₁₀), temperature (°C), and relative humidity (RH).

Data is collected every minute and is then processed into hourly averages. The sensor in Wasilla has run well since its installation in August of 2024; there have been no physical issues with the sensor.

This data report covers the date range of August 6, 2024, to September 30, 2024.

Daily PM_{2.5} Air Quality Index (AQI) for August 6, 2024 - September 30, 2024

2024 Summer Season Air Quality Report for Knik Tribe

Median PM_{2.5} Concentrations for August 6, 2024 - September 30, 2024

Descriptive Statistics of Air Pollutants*

Parameter	1-hr PM _{2.5} (µg/m³)	24-hr PM _{2.5} (µg/m³)	1-hr PM ₁₀ (µg/m³)	24-hr PM ₁₀ (µg/m³)	1-hr O ₃ (ppb)	1-hr NO ₂ (ppb)	1-hr NO (ppb)	1-hr CO (ppb)
Min	0.00	0.30	2.00	0.30	21.60	2.30	1.40	651.05
Mean	1.44	1.62	15.61 **	17.45 **	38.92	13.98	2.32	785.52
1 st Max	57.10	8.10	652 **	113 **	58.10	29.36	11.89	1493.31
2 nd Max	17.00	6.30	464 **	99 **	58.00	26.90	7.79	1200.25

Data Discussion

Wasilla's PM_{2.5} ambient air quality for the summer 2024 season primarily remained in the “good” range of the Air Quality Index (AQI; more information about AQI is provided on page 3), with only five hours of “moderate” or “unhealthy for sensitive groups” AQI levels throughout the reporting period. Diurnal patterns show little variability of PM_{2.5} concentrations across different times of day, days of the week, or different months.

* These statistics are based on preliminary data readings and are intended to provide a brief overview of sensor activity. Finalized data may be obtained upon request and through our annual statistical reports. Data from the community sensor network is non-regulatory and not comparable to the EPA's National Ambient Air Quality Standards (NAAQS; more information about the EPA NAAQS is provided on page 3).

** PM10 particle sensors are influenced by weather events such as fog and snow due to hygroscopic effects, creating false maximum values that do not pose health risks.
